

Bullying in School: Definition, Prevalence, Effects, Prevention, and Intervention

Bullying has become a high priority problem for many schools. Across the country, most states have passed laws that prohibit bullying and harassment because of the hostile and discriminatory environment that they create. Students who are targeted by bullying suffer educational discrimination as well as a host of internalizing and externalizing problems. Likewise, the effects on bullies and bystanders are not to be dismissed. This webinar will take participants through basic and mid-level information on bullying that will provoke critical thinking about how we have traditionally sought to prevent and respond to this problem. It will consider how context shapes behaviors and how we as adults in the school environment can influence context. Finally, this webinar will look at ways to respond to bullying that avoid the traditional "investigate, interrogate, blame, and punish" approach to solving the problem of bullying.
